

An Ecosystem of Support with RadarFirst Integrations

Optimize risk mitigation organization-wide with RadarFirst's preferred partners.

We play well with others! Amplify your ROI across your risk mitigation and corporate support partners by integrating RadarFirst with key enterprise solutions, such as your HR software, SEIM tools, ticketing systems, and more.

Scale. Streamline. Automate.

Available integrations on the Radar® platform include prebuilt integrations and API-based integrations, as well as the option for custom or bespoke integrations.

Prebuilt Integrations

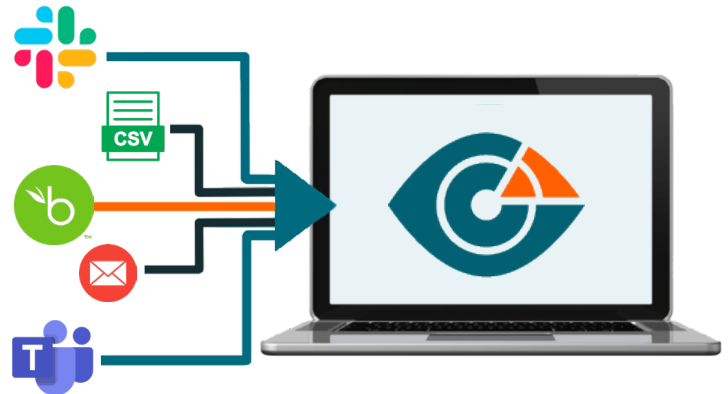

Pre-built integrations offer sophisticated and seamless connections to enterprise solutions. They are quick to enable and secure. Prebuilt integrations currently available in Radar® Privacy include:

BambooHR

- Effortlessly sync your employee database updates to Radar® Privacy in real time, automating time-intensive but critical tasks and ensuring accurate incident data and assessments.

IMAP

- Email-generated incident creation within Radar® Privacy offers flexible incident reporting via Gmail and Outlook, anytime, from anywhere to reduce reporting delays and, ultimately, an incident's discovery-to-assessment time.

Slack

- Never miss a critical Radar® Privacy incident update by leveraging your enterprise collaboration tool with real-time Slack notifications, reducing your discovery-to-assessment elapsed time for Privacy incidents.

Microsoft Teams

- Real-time incident alerts and updates with Radar® Privacy and Microsoft Teams. Leverage your enterprise collaboration tool to reduce your discovery-to-assessment elapsed time for Privacy incidents.

CSV

- Automate incident data intake to Radar® Privacy from a CSV file to seamlessly create new incidents, or to transfer incident history to Radar® Privacy from a legacy system.

API Integrations

A robust and agile API offers additional integrations to Radar® Privacy, including:

ServiceNow ITSM/SecOps

- Enable cross functional incident management between Privacy, Security, and IT teams with Radar® Privacy's integration to ServiceNow's ITSM and SIR solutions, reducing mean time to incident resolution.

ServiceNow Privacy Management

- Full spectrum privacy incident response and management, from efficient digital workflows to assessing privacy incidents and automating the breach notification decisioning process, potentially reducing both regulatory fines as well as costly impacts to organizational trust.

Protenus

- Automatically synchronize PHI incident data between Protenus and Radar® Privacy, creating a secure exchange of critical information to speed the assessment and resolution of privacy incidents.

Splunk SOAR

- Sync your IT, Security, Privacy teams with a Splunk SOAR integration to Radar® Privacy. Automate incident creation, attachment uploads, and data syncs to generate Radar® Privacy data reports within Splunk.

Custom Integrations

Developed in direct collaboration with our customers, custom-built integrations are designed to support enterprise-level customers who require unique support or intensive digital transformation. Bespoke integrations available for Radar® Privacy and Radar® Compliance.

Archer

- When implemented side-by-side, Radar® Privacy and Archer offer a complete digital transformation of your incident management program with purpose-built risk management and automated incident assessments and breach notification recommendations to maximize your organizational benefits of both solutions.

SAI360

- Drive the maturity and digital transformation of your overall compliance program with an integration between SAI360 and Radar® Privacy. Seamlessly integrate incident data from SAI360 to Radar® Privacy for automated incident assessment and breach notification recommendations.

Increase team efficiency, help remove cross-functional silos, and create an ecosystem of support for your cyber, privacy, and compliance teams. Join a supportive culture of efficiency and compliance made possible by RadarFirst and our strategic integration partners.
